

CLAMSHELLS

ADD-ONS

Reaction ring for heavy wall applications

For super heavy applications with thick wall and/or hard alloy pipes, the ORR enhances the axial and linear stability. Manufactured from steel it mounts on the rear of the aluminium ring. It is also equipped with 4 steel location stabilisers to enhance the range and rigidity of the machine for heavy duty applications. The ORR dramatically increases the rigidity when cutting and/or bevelling and also saves time and cost on purchasing clamshells made completely of steel.

Universal counterbore attachment

Designed for precision counterboring of tube and pipe inside diameters. The attachment is supplied with both 6" and 10" long sleeves and attaches directly to all our split face clamshells. This can be mounted to the tool slide or the bridge cross slide and utilised a simple hand wheel for precision.

Flange facing bridge cross slide

The bridge cross slide is available for all our clamshell machines. With quick attachment to the existing clamshell bolt holes, it can be quickly used for flange facing or single point heavy wall machining.

Tool slides

These rugged tool slides are built for strength and durability. Standard sizes are 1", 3" and 6", other sizes are available on request. Out of round tool slides are also available (below).

Out of round

Out of round tool slides - can be a solution for misshapen tubes and pipes. Out of round slides feature durable springs and tracking module that follows the contours of a deformed or less than perfectly round pipe. Built with the same quality, for strength and durability as our other tool slides.

Support hinge

Accessory for convenient folding and unfolding of the device. It also allows the use of cranes and lifts that make work easier.
