

PIPE CLAMPS

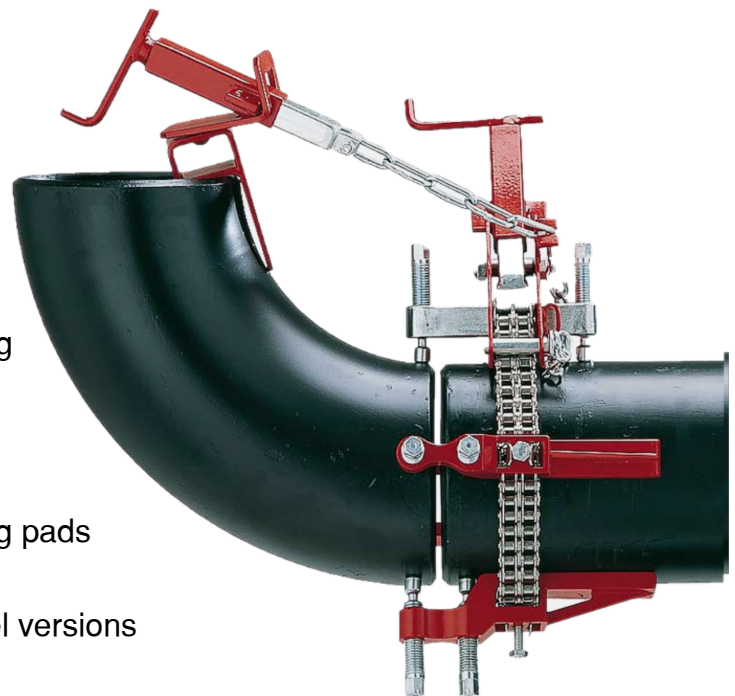

CHAIN CLAMPS

The Chain Clamp is a Double Jackscrew clamp for aligning and reforming pipes up to 54" diameter. Supplied in a metal storage box, each clamp comes with the length of chain required for the given pipe range and double jackscrew jackbars for clamping and aligning. A fitting alignment device is also included for the positioning of tees and elbows. A range of double chain clamps is also available for ultra heavy duty applications, please enquire.

Key Features

- ▶ Can align all pipe schedules accurately
- ▶ Jackscrews enable elimination of Hi-Lo points either side of the joint.
- ▶ Can re-form up to schedule 40 pipes
- ▶ Joints can be fully welded without removing the clamp
- ▶ Elbows, Tees and other fitting can be accurately aligned
- ▶ Jackbars have two jackscrews with pivoting pads to compensate for uneven surfaces
- ▶ Available in both **Carbon & Stainless** steel versions

Part No.	Pipe Diameter Range	No. of Jackbars	Reformed Pipe to Schedule	Aligns Pipe to Schedule	Shipping Wt Kgs
